

# Pre-compliance

Save your company valuable time and money by involving Nemko early in the product development process.

Nemko can assist you in every stage of the product development process. The earlier you involve us, the higher the chance is of you saving development costs and time-to-market.

## Nemko's product pre-compliance service includes:

- Pre-evaluation
- Pre-testing
- Certification and international approval recommendations

## Why pre-evaluation?

- Make sure your product will comply with necessary regulatory requirements
- Avoid surprises and potential delays in market launch of your product

## Why pre-testing?

- Reduce risk of re-designing your product during testing
- Ensure that your product development process is on track
- Avoid non-conformities before your product is put to production
- Use test results as basis for your certification and international approval

## Why certification and international approval recommendations?

- Identify your product's geographical market potential from a regulatory perspective
- Ensure shortest possible time-to-market
- Avoid potential delays in market launch

## Whether you are a product designer, manufacturer and/or distributor, our compliance engineers and regulatory experts will provide you with:

- Extensive knowledge of latest national and international regulatory requirements
- Application of directives and interpretation of product standards
- Professional review of your documentation and product design
- Support to secure you smooth testing, verification and certification

## Nemko's pre-compliance service follows proven steps to guide you in your development process:

- What category does your product belong to?
- In which environment will it be used? At home, in the office, in hospital, on a maritime or potential explosive location or elsewhere?
- Which critical components is your product made up of?
- Depending on product category, different product standards apply. We assist you in identifying which are relevant for your product

## Where will your product be marketed?

- In which countries or geographical regions do you want your product to be sold? Do these markets have special regulations and requirements?

## Do you have specific customer requirements?

- You may experience specific requirements from your customers, which are in addition to national and international standards and directives?

From product design, prototype testing, through to production and market launch -**you can rely on Nemko to guide you past all regulatory requirements!**
