

# Energy efficiency certification services for the USA

Many types of Electrical and Electronic apparatus are prescribed in federal and some state regulations in the USA as having Minimum Energy Performance Standards (MEPS) which require mandatory evaluation.

Whether the product falls under the US Department of Energy (DoE) or State jurisdiction such as the California Energy Commission, registration is often required. Also depending on jurisdiction the certification process varies. Working with Nemko will help you understand the regulations and how to achieve the necessary certification.

**Nemko can evaluate to the prescribed MEPS for many products including:**

- Televisions
- Audio/Video
- External power supplies
- Battery Charger Systems

Related information

Other facts about the services:

- Testing can be performed at Nemko's recognised laboratories around the world.
- A program to cover multiple jurisdictions (US and non-US) can be developed and implemented to save you time and money
