Cyber security for connected products

Household appliances are getting smart and they are getting connected. We see that electrical heaters, refrigerators, ventilation systems and more, are being connected to the net and controlled through mobile apps.

Turning a conventional product into an IoT opens a whole new arena of security challenges and a new set of standards and requirements. Nemko offers a range of services for cyber security from training and workshops to evaluations and certifications according to the latest IoT cyber security standard. [Read more here.](#)
