

IT/AV produkter

Å skaffe til veie dokumenter som eks. brukermanual, liste over kritiske komponenter, tekniske tegninger, rapporter osv. er en del av prosessen med å få et IT/AV produkt testet, og deretter evt. sertifisert. I listen under finner du de vanligste dokumentene som må være på plass før prosessen kan påstartes.

- CB Scheme Report and Certificate for the Power Supply
- User/Instruction Manual and/or Technical/Service Manual
- Schematics and possible Block diagram (.pdf format)
- PCB trace layouts and Component layouts (.pdf format)
- Input Power Rating (e.g. 100-240VAC, 50/60Hz, 3.5A max; 12V DC 2 A)
- Copy (a complete sample) of the marking plate/rating plate
- Report/Certificates for batteries according to relevant IEC standard (except consumer-grade alkaline batteries) and circuit diagram for the protection circuit
- Detailed List of Critical Components, including manufacturer, part#, ratings and agency certifications (Critical Components are defined as all components that may be relied upon to prevent a safety hazard)
 - power supplies, power on/off switches, appliance inlets, fuses/holders on mains, transformers, capacitors, optocouplers, plastic enclosures (flame rating), batteries & onboard battery circuits, circuit breakers, motor and motor controllers, valves, fans, lamp/ballasts, etc.
- Certificates for Critical Components (must include relevant EN or IEC standards)
- Specifications of enclosure material made of plastic and printed circuits boards (Manufacturer, Type, flammability class, temperature class and minimum thickness)
- Specifications of the fan, including airflow (CFM).
- Specifications of transformers and coils

Våre testingeniører kan gjennomføre en dokumentevaluering slik at du kan være trygg på at du har det du trenger før testing. Dette vil spare deg for mye tid senere i prosessen.
